

BERRINGA

Medi BioActive Manuka future markets
2024 – 2025

Scientific Research/Insight

- + Australian Manuka has strong antibacterial properties, particularly at higher MGO levels
- + Research and in field use shows that Manuka can be highly effective for skincare, wound treatment and other topical uses, as well as oral use for internal health
- + Research has also shown that high MGO Manuka can perform as well as the best antibiotics, as well as being effective in wound care where other treatment methodologies have not worked

The following images demonstrate a range of potential applications for Berringa's 100% Australian Manuka
